

HANDSETS/PROGRAMMERS

GE LX HANDSET

This handset is used to monitor and adjust traction or pump motor system functions and status fault codes. The handset is the same for all GE controls, however the cable will change between control types.

FEATURES

- Monitor existing system fault codes
- Monitor battery state of charge on systems with BDI
- Allows full adjustment of all compatible controller settings
- Live monitoring of intermittent fault codes
- Monitor hour meter reading.

Kit Includes:

- Handset
- Appropriate Cord
- Instruction Sheet
- Carrying Case

41-LXHS-XX
